

# 2003 ASTRONOMY MAGAZINE INDEX

## Subject index

- A**
- accidents, space-related, 7:42-47
  - Achernar (star), 10:30
  - Advanced Camera for Surveys, 4:28
  - ALMA (Atacama Large Millimeter Array), 3:36
  - Amalthea (Jupiter's moon), 4:28
  - Amateur Achievement Award, 9:32
  - Andromeda Galaxy
    - picture of, 2:12-13
    - young stars in, 9:86-89
  - Annefrank (asteroid), 2:32
  - antineutrinos, 4:26
  - antisolar point, 10:18
  - Antlia (constellation), 4:74-77
  - aphelion, 6:68-69
  - Apollo 1 (spacecraft), 7:42-47
  - Apollon 12 (spacecraft)
    - accident, 7:42-47
    - J002E3 satellite from, 1:30
  - Apollon 13 (spacecraft), 7:42-47
  - Aquarian equinox, 4:18
  - Arecibo Radio Telescope, 2:28
  - asteroids
    - See also names of specific asteroids
    - 22 Kalliope, 10:32
    - distinguishing size of, 7:69
    - observing with naked-eye, 4:78-79
    - simulation of falling in ocean, 2:26, 28
    - triggering volcanoes, 7:30
  - astronauts, 1:72
  - astronomers, amateur
    - appreciating beauty and organization of universe, 1:100-101
    - Edgar Wilson Award for discovery of comets, 1:130
    - inspiring sights to observe, 9:22
    - neophyte, 1:104-105
    - observing Mars, 8:80-85, 92-95
    - observing outer space, 10:20
    - observing Uranus and Neptune, 7:86-87
    - punctuality of, 12:18
    - Russ, Tim 10:78-81
  - astronomy (in general), stupid questions about, 9:20
  - Astronomy* magazine
    - history of, 9:40-47
    - 30 years of, 9:48-51
  - astrophotography, 7:78-81, 9:52-59, 12:94-97.
    - See also cameras
  - Astrophysical Virtual Observatory, 4:32
  - Astro-Physics 130mm Starfire EDT refractor, 11:82-84
  - Atacama Large Millimeter Array (ALMA), 3:36
  - atomic clocks, 1:32
  - Australia, eclipse in, 4:80-83

**B**

    - B1957+20 (pulsar), 6:30
    - Baikonur Cosmodrome accident, 7:42-47
    - Barnard 68 (molecular cloud), 6:31
    - binary black holes. See black holes, binary
    - binary stars, 1:78-82, 7:14-15
    - binary systems, 3:73
    - binoculars, 4:92-97, 5:94-98, 12:20
    - black clouds, 12:50-51
    - black holes, binary
      - GRO J1655-40, 3:30
      - in NGC 6240 (galaxy), 3:36
      - SS 433, hot gas lobes extending from, 3:34
      - intermediate-size, 1:32
      - mid-size, 7:31
      - search for golden ratio, 4:52-57
      - in skinny spiral galaxy, 8:34
      - whether formed before/after galaxies, 5:30
      - why hard to prove, 8:73
      - X-ray jets from, 1:26, 28
    - Boomerang Nebula, 6:27
    - Brahe, Tycho, 12:52-57
    - budget for space research, 5:46-51

**C**

      - Camelopardalis (constellation), 9:92-95
      - cameras
        - CCD (charge-coupled device) cameras, 3:84-87, 5:84-87
        - software and connections, 3:86-87 and telescope, astrophotography with, 10:86-89, 92
      - Canada, plans for visit to Mars, 3:35
      - Canadair robot, 3:35
      - Cassini Division, 11:76-77
      - Cassini (spacecraft), 2:32
      - Catchall (Martian crater), 11:30
      - CCD (charge-coupled device) cameras, 3:84-87, 5:84-87
      - CCD techniques, 9:100-105
      - Celestron C6-R (refractor), 11:84
      - Celestron C8-N (reflector), 11:86
      - Celestron CGE-1100 (amateur telescope), 11:88
      - Celestron NexStar 8 GPS (amateur telescope), 1:84-87
      - Celestron NexStar 8i (amateur telescope), 11:89
      - Centaurus A (NGC 5128) galaxy
        - 1,000 Mira stars discovered in, 10:28
        - picture of, 10:12-13
        - ripped apart satellite galaxy, 2:32
      - Centaurus (constellation), 4:74-77
      - cephheid variable stars, 9:90-91
      - Challenger (space shuttle), 7:42-47
      - Chamaeleon (constellation), 12:80-83
      - Chandra X-ray Observatory
        - confirming association of gamma-ray bursts and supernovae, 7:31
        - monitoring black hole binary SS 433, 3:34
        - reveals high-speed galaxies, 8:32
        - supernova remnant, 9:28
      - Chickulub (asteroid), 7:20
      - China, preparations to send astronauts to space, 6:28, 10:29
      - Circinus (constellation), 6:70-74
      - clouds, black, 12:50-51
      - CMEs (coronal mass ejections), 6:27
      - cold dust, 2:22
      - color filters, 8:86-89
      - Columbia (constellation), 2:70-74
      - Columbia (space shuttle), 7:42-47
      - Coma Berenices (constellation), 5:76-79
      - Comet C/2002 V1, 6:28
      - Comet C/2002 X5, 4:28
      - Comet Halley, 12:34
      - comets
        - See also names of specific comets
        - Edgar Wilson Award for discovery of, 11:30
        - passing Sun, 6:69, 10:26
        - seeking, 1:74-77
      - Committee on the Status of Minorities in Astronomy (CSMA), 5:55-58
      - Compton Gamma-Ray Observatory, 12:32
      - computers
        - astronomy desktop for, 8:34
        - cosmic acceleration and dark energy calculation, 3:42-47
      - constellations
        - See also names of specific constellations
        - best of, 2:94-95
        - references for pronunciations, 10:68-69
      - Coronado MaxScope 70 (amateur solar telescope), 11:84
      - Coronado's NearStar (amateur telescope), 6:86-90
      - coronal mass ejections (CMEs), 6:27
      - Corvus (constellation), 3:75-78
      - cosmic acceleration, 3:42-47
      - cosmic green, 3:20
      - cosmic jets, 1:26, 28
      - cosmologists, 11:18
      - Crab Nebula, 1:24, 26
      - Crater (constellation), 3:75-78
      - Crux (constellation), 9:14-15
      - Crux (constellation), 6:70-74

**D**

        - dalmatian terrain effect, 10:30
        - dark energy, 3:42-47
        - dark matter
          - challenge to theory of, 2:26
          - in elliptical galaxies, 8:31
          - searching Lyman alpha forest for, 7:33
        - Davida (asteroid), 12:31
        - Davis, Raymond, 1:32
        - day of equinoxes, 11:68
        - DEM L 106 (nebula), 3:36
        - Dextre robot, 9:28
        - DGM Optics OA-3.6ATS off-axis reflector, 10:82-85
        - Dobsonian telescopes. See names of specific
        - Dobsonian telescopes
          - double cluster, 4:12-13
          - drawing solar system, 1:88-91

**E**

          - Earth
            - global warming, 8:36
            - greenhouse gases on, 7:36-41
            - magnetic field, 8:72-73
            - Mars simulation on, 1:46-51
            - observing Mars from, 7:32
            - planets like, 6:48-53
            - seasons of, 3:72-73
            - tilt of axis, 2:68, 5:72-73
          - EarthExplorer web site, 4:30
          - eclipses
            - in Australia (2003), 4:80-83
            - lunar
              - of 2003, 5:18
              - of May 15, 2003, 5:60, 80-83, 88-89
            - solar
              - of May 31, 2003, 5:80-83, 88-89
          - Edgar Wilson Award, 11:30
          - Egg Nebula, 8:36
          - elliptical galaxies, 8:31
          - Eta Carinae (nebula), 5:29
          - ETX-90EC (amateur telescope), 11:89
          - Europa (Jupiter's moon), 12:30, 77
          - exoplanet magnetosphere, 11:28
          - extrasolar planets. See planets, extrasolar
          - eyepieces, telescope, 9:110-115, 116

**F**

            - Fera, Bob and Janice, 11:78-81
            - filters
              - color, 8:86-89
              - multiple, 4:86-87
              - solar, 9:106-109
            - 511 (asteroid), 12:31
            - Fomalhaut (star), 2:22

**G**

              - Gagarin, Yuri, 4:32
              - galaxies
                - See also names of specific galaxies
                - elliptical, 8:31
                - high-speed, 8:32
                - how evolve, interact, and grow, 4:46-51
                - merging of, 5:52-53
                - revealed by Hubble Space Telescope, 4:28
                - shredded by other galaxies, 5:29
                - spiral, 5:33
                - without stars, 11:28
              - Galileo, Galilei, 4:72-73
              - Galileo (spacecraft)
                - end of mission, 10:36-41, 12:34
                - up-close planetary views from, 9:36
              - Gamma Leonis (double star), 5:65
              - gamma-ray bursts
                - associated with supernovae, 7:31, 10:29
                - discovery of afterglow from, 12:31
                - discovery of birthplace, 2:48-52
                - link with high-energy cosmic rays, 12:32
                - understanding through High Energy Transient Explorer (HETE), 4:24
              - Ganymede (Jupiter's moon), 8:30
              - Garden Sprinkler Nebula, 9:30
              - gases, in Omega Nebula, 12:31
              - gas jets, 9:30
              - Gemina (neutron star), 11:29
              - Gemini North telescope, 3:34
              - Gemini VIII accident, 7:42-47
              - geologic age measurements, 11:68-69
              - Giacconi, Riccardo, 1:32
              - Gillett, Fred, 3:34
              - global warming, 8:36
              - globular clusters, 5:29
              - globular star clusters
                - differences in, 11:48-53
                - how survive, 10:68
                - NGC 6397, 11:28
                - uniqueness of Omega Centauri, 2:28, 30
              - golden ratio, 4:52-57
              - gravity waves, 10:32
              - Greeks, and equinoxes, 11:68
              - greenhouse gases, 7:33
              - green stars, 1:72-73
              - GRO J1655-40 (black hole binary), 3:30

**H**

                - Hauschildt, Peter, 8:22
                - HD 179949 (star), 11:28
                - Heinze 3-1475 (nebula), 9:30
                - Helfand, David, 10:48-53
                - helium, 8:32
                - Helix Nebula, 9:28
                - Hester, Jeff, 3:18
                - high-energy cosmic rays, 12:32
                - High Energy Transient Explorer (HETE), 4:24
                - high-speed video system, 5:84-87
                - Hilo Operations Facility, 3:30
                - Holland, Wayne, 2:22
                - Hubble Deep Field, 4:32
                - Hubble Space Telescope (HST)
                  - 10 years of, 12:36-43
                  - accident with, 7:42-47
                  - images of Saturn, 12:28
                  - revealing galaxies, 4:28
                - hydrogen, 10:28
                - Hydrus (constellation), 10:72-75

**I**

                  - iceball, found beyond Pluto, 1:24
                  - India, plans to visit Moon, 10:29
                  - infrared survey, 8:31
                  - integrating wavelengths, 4:24
                  - interferometry
                    - techniques for, 7:48-53
                    - VLT interferometer, 2:32
                  - International Space Station, 3:31
                  - Internet, virtual observatories on, 9:80-85
                  - Intes MK67 (amateur telescope), 11:89
                  - Io (Jupiter's moon), 3:30
                  - ISAAC multi-mode instrument, 4:32

**J**

                    - J002E3 satellite, 1:30
                    - Jet Propulsion Laboratory, 1:32
                    - JIMO (Jupiter Icy Moon Orbiter), 7:33
                    - Jodrell Bank Observatory, 3:34
                    - Jupiter. See names of specific moons of Jupiter
                    - Jupiter Icy Moon Orbiter (JIMO), 7:33

**K**

                      - Koshiba, Masatoshi, 1:32
                      - Kudo, Tetuo, 4:28

**L**

                        - Lagrangian points, 6:31
                        - Large Magellanic Cloud (LMC)
                          - high-mass stars dying in, 8:30
                          - supernova explosion in, 10:30
                        - Lasik surgery, 7:68
                        - Lepus (constellation), 2:76-74
                        - libraries, astronomy-related, 12:90-93
                        - light, under influence of gravity, 4:73
                        - limiting visual magnitude, 1:72
                        - Little Ghost Nebula, 2:24
                        - LMC. See Large Magellanic Cloud (LMC)
                        - Local Group (galaxy cluster), 11:38-43
                        - Lovell Telescope, 3:34
                        - lunar eclipses. See eclipses, lunar
                        - Lupus (constellation), 8:76-79
                        - Lyman alpha forest, 7:33

**M**

                          - M17 (nebula), 12:31
                          - M33 (galaxy), 11:72-75
                          - M65 and M66 (stars), 5:65
                          - M74 (galaxy), 10:28
                          - M82 (galaxy), 5:29
                          - magnetic field of Earth, 8:72-73
                          - MapQuest, 4:30
                          - Marcy, Geoff, 5:18
                          - Mare Nubium, 10:76-77
                          - Mars
                            - amateur astronomers observing, 8:80-85, 92-95
                            - ancient climate of, 3:48-53
                            - astronomers ideas about, 8:40-45
                            - Canada's plans to visit, 3:35
                            - Catchall crater, 11:30
                            - channels from lava, 12:30
                            - climate of, 12:34
                            - collecting samples with Canadair robot, 3:35
                            - crater in Newton basin, 1:28
                            - east and west poles, 8:32
                            - erosion on, 11:30
                            - geological feature on, 11:30
                            - greenhouse gases on, 7:36-41
                            - launched missions to, 9:32
                            - Nozomi space probe mission, 12:32
                            - observing, 3:80-83, 7:32, 8:18, 20
                            - Phoenix lander spacecraft planned mission to, 11:29
                            - polar regions of, 3:48-53

## Title index

**A**  
Absurd universe, 11:44-47  
All-in-one filter system, 4:86-87  
ALMA given the go, 3:36  
almighty burst, An, 8:31  
Amalthea, a pile of rubble, 4:28  
Amateur beats pros, 12:31  
Amateur comet, 4:28  
Andromeda's starry realm, 2:12-13  
antislip point, The, 10:18  
Aquarian equinox, 4:18  
Astronomers win Nobel Prize, 1:32  
Astronomy from a car, 6:20  
Astronomy in paradise, 9:96-99  
Astronomy's anniversary, 12:16  
Attention holiday shoppers, 11:20

**B**  
Basic CCD techniques, 9:100-105  
Beginner's luck, 9:22  
Bent light, 4:28  
Best constellation is..., 2:94-95  
Beyond the Milky Way, 10:20  
Big eye on the universe, 4:38-45  
Big glass, 5:38-44  
Big measurement, little planet, 3:36  
Big science, 5:46-51  
Binocular benefits, 12:20  
Bite of the pulsar, 6:30  
black cloud, The, 12:50-51  
black hole, then the stars, The, 5:30  
Black hole breaks new galactic ground, 8:34  
Black hole bullets, 3:34  
Blazing a new path, 8:52-57  
Boogie-ing galaxies leave wakes, 8:32  
Boomerang's new look, 6:27  
Broken symmetry makes helium, 8:32  
Build an astro library, 12:90-93  
Burst revealed, 4:24

**C**  
Camelopardalis and Ursa Minor, 9:92-95  
Canada lends an arm, 9:28  
Canada sees Mars in its future, 3:35  
Can minorities break astronomy's glass  
ceiling?, 5:55-58  
Cassini eyes Saturn for first time, 2:32  
Catch a celestial tango, 5:52-53  
Cathall crater, 11:30  
Celebrating 30 years of *Astronomy*, 9:6  
Centaurus and Antlia, 4:74-77  
Centaurus A sheds dwarf, 2:32  
Chasing the shadow down under, 4:6  
Chicxulub revisited, 7:28  
China aims men at space, 6:28  
Choosing an eyepiece, 9:110-115  
cluster's mixed-up start, A, 2:28, 30  
Collision investigation, 3:36  
Color of a summer night, 7:18  
Coma Berenices, 5:76-79  
Comet awards, 11:30  
comet seekers, The, 1:74-77  
Comets take on the Sun, 10:26  
Compact galaxy trios, 8:16  
Coronado's NearStar scope, 6:86-90  
Corvus, Crater, and Sextans, 3:75-78  
Cosmic adventures for the neophyte  
astronomer, 1:104-105  
cosmic coincidence, A, 1:30  
Cosmology's big three, 7:30  
Crab's inner workings, The, 1:24, 26  
Critic search, 3:35  
Crux, Musca, and Circinus, 6:70-74  
Crystal-clear supernovae, 8:36

**D**  
Dalmatian terrain, 10:30  
Dark heart of a globular, 1:32  
Dark matter passes test, 2:26  
Darkness down under, 4:80-83

Debating origins, 9:28  
Diamonds in the rings, 11:76-77  
Dim future for extrasolar planet searches, 5:36  
Dirt makes ice mounds on Europa, 12:30  
Double vision, 4:12-13, 7:20

**E**  
Early Mars cold, dry?, 12:32  
Earth calling Seagull, 6:30  
Earth's atmosphere "just right", 10:16  
Eclipse and transits, 5:88-89  
Eclipse extravaganza, 5:80-83  
Egg's scrambled light, 8:36  
Eta Carinae may have a partner, 5:29  
Evaporating protoplanets, 5:30  
Excellence, 9:32  
Exoplanet magnetosphere found, 11:28  
Explorer silenced, 6:30  
Exploring the Pinwheel, 11:72-75  
Eyeing the world with an active desktop, 8:34

**F**  
Fast and furious, 12:32  
Fast formation, 3:31  
Filtering the sky, 8:86-89  
Finding life with robots isn't easy, 11:29  
Find the faintest planet, 6:76-77  
"F" in science, 9:20  
Flexible focus, 6:27  
Focus on finders, 3:94-100  
Forensic astronomy, 6:27  
Forming globulars, 5:29

**G**  
Galaxies without stars, 11:28  
Galaxy history, 11:32  
Galileo mission ends in glory, 12:32  
Galileo's end of the road, 10:6

Gemini North named to honor Fred Gillett,  
3:34  
Get ready for Mars, 8:80-85  
Get up-and-go power, 3:90-93  
Ghostbusting the universe, 12:44-49  
Giant iceball found beyond Pluto, 1:24  
Going global, 1:84-87  
Goldilocks and the three planets, 7:36-41  
Gravity waves limit pulsar spin?, 10:32  
Great balls of fire, 1:48-53  
Gunning for the gas giants, 7:86-87

**H**  
Halley's comet caught, 12:32  
Handling Mars, 8:18  
Happy 1.4 x 10<sup>10</sup>th birthday, 6:26  
Harvest the Moon, 6:42-47  
Herschel, Peter, 8:22  
Hester, Jeff, 3:18  
High-energy connections, 7:31  
High-power twin optics, 5:94-98  
Hilo groundbreaking, 3:30  
HIPASS, 5:30  
Hires improved, 5:32  
Home on Lagrange, 6:31  
Hot stars hide behind shrouds of gas, 8:28  
How not to erupt, 7:30  
Hubble picks up a dumbbell, 6:30  
Hubble's dazzling decade, 12:36-43  
Hubble Space Telescope, 2:24  
Hubble Space Telescope images Saturn, 12:28  
Hunting in the forest, 7:33

**I**  
Ikonos satellite, 2:28  
Imaging the Red Planet, 8:92-95  
Imaging the Sun in H $\alpha$ , 6:78-81  
Imaging with webcams, 12:94-97  
Infrared Deep Field South, 4:32  
Integrating wavelengths, 4:24  
In the wake of Gemini, 11:29  
Io: Brought to you by the moon Ganymede  
and planet Jupiter, 8:30  
Io erupts, 3:30  
It's crowded in here, 11:28  
It's Yuri's night, oh what a sight!, 4:32

**J**  
Jets from a black hole, 1:26, 28  
jetting spiral, A, 5:33  
Join the hunt, 1:54-58  
jovian dozen, A, 7:31

**K**  
Keck shoots minor planet, 12:31  
Killer asteroids make big splash, 2:26, 28

**L**  
Last century not so hot, 8:36  
Left in the dark, 11:18  
Leonids, craters, and pillars, 3:16  
Lepus and Columba, 2:70-74  
Life-giving black holes, 7:31  
Linde, Andrei, 7:21  
LMC blows bubbles, 3:36

Lobed monster in Sagittarius, 5:32  
Lonely planets?, 6:36-41  
long goodbye, The, 10:36-41  
Lost in space? Check the map, 8:31  
Lovell gets a face-lift, 3:34  
Lucky helix placement, 9:28  
Lunar eclipses, 5:20  
Lupus and Norma, 8:76-79  
lure of meteorites, The, 12:84-87

**M**  
M17's champagne X rays, 12:31  
Magnetic star acts up, 10:32  
Make way for MIDI, 4:24  
Marcy, Geoff, 5:18  
Mars — better than ever, 3:80-83  
Mars's east & west poles, 8:32  
Mars global surveyor, 1:28  
Mars's highs and lows, 5:14-15  
Mars: look now, go now, 7:32  
Mars mission no one knows about, The, 12:32  
Mars on Earth, 1:46-5  
Mars photojournal, 10:30, 12:30
